Known Issues

Version: Release V5.4.2 · **Date of Release:** 30/10/2026

#	Known issue and workaround	Status	Affected models	Status comment	Release estimate	Owner
1	The Amount Confirmation screen on the Axium device displays `$` in the top line of text when the currency being used is GBP.	**Fixed**	All Axium devices	The Amount Confirmation screen is removed in Transaction Initiator UI v1.4.0. Update the Transaction Initiator UI.	Release 5.4.2	NMI
3	Only transactions associated with the currently configured environment can be processed in the offline queue. E.g. if configured to Staging, only offline transactions performed against staging credentials will be able to be processed.	**Open**	All Axium devices	NMI to fix in future release	N/A	NMI
6	There is a known issue whereby it is possible to attempt to update firmware during a transaction that can cause the transaction to hang.	**Open**	All Axium devices	NMI to fix in future release	N/A	NMI
7	In some instances the Device Setup Application may restart the setup process once during initialization. This does not impact the overall setup, which continues and completes successfully.	**Open**	All Axium devices	NMI to fix in a future release	N/A	NMI
8	Payment Devices SDK v5.2.0 is incompatible with Transaction Initiator UI v1.2.0 and will not function correctly. Integrations using Transaction Initiator UI v1.2.0 must upgrade to Payment Devices SDK v5.3.0 or later.	N/A	All Axium devices	N/A	N/A	N/A

Issue numbering is carried over from the source issue log, so it is not contiguous — closed issues keep their original number rather than being renumbered.
